

AMENDMENTS TO THE CLAIMS

Please amend the claims as follows:

1. (Currently Amended) A method of installing desired-language translations of software in a computer system, the software to be installed, at the time of assembly of the computer system, in response to a customer's order, the method comprising: creating a record that comprises identifiers that specify software to be installed in the computer system;
reading, from the record, a first identifier that identifies operating system software to be installed in the computer system;
based on the first identifier, establishing a first variable that specifies the operating system type and a second variable that specifies a desired- language;
reading, from the record, a second identifier that identifies other software to be installed in the computer system;
parsing the second identifier into a call to a batch file that (i) causes a native language version of the other software to be installed in the computer system and (ii) calls a translation script;
based on the type of file in which the other software is stored, and based on the operating system software, the translation script ~~selects~~ selecting a translation routine from a set of available translation routines; and
based on the desired language translation, the selected translation routine identifies identifying native-language textual portions of the other software and ~~substitutes~~ substituting the desired-language translations contemporaneously with the installation of the other software into the computer system.

2. (Cancelled).

3. (Cancelled).
4. (Cancelled).
5. (Cancelled).
6. (Cancelled).
7. (Cancelled).
8. (Cancelled).
9. (Cancelled).
10. (Cancelled).
11. (Cancelled).
12. (Cancelled).
13. (Cancelled).
14. (Cancelled).
15. (Cancelled).
16. (Cancelled).

17. (Currently Amended) A method of translating text portions of software during installation of the software in a computer system, the method comprising:
receiving a customer order;
creating a record that corresponds to the customer order and comprises identifiers that specify software to be installed in the computer system;
reading, from the record, a first identifier that identifies operating system software to be installed in the computer system;
based on the first identifier, establishing a first variable that specifies the operating system type and a second variable that specifies a desired- language;
reading, from the record, a second identifier that identifies other software to be installed in the computer system;
parsing the second identifier into a call to a batch file that (i) causes a native language version of the other software to be installed in the computer system and (ii) calls a translation script;
based on the type of file in which the other software is stored, and based on the operating system software, the translation script ~~selects~~ selecting a translation routine from a set of available translation routines; and
based on the desired language translation, the selected translation routine identifies identifying native-language textual portions of the other software and ~~substitutes~~ substituting the desired-language translations contemporaneously with the installation of the other software into the computer system.

18. (Cancelled).

19. (Cancelled).

20. (Cancelled).

21. (Cancelled).

22. (Cancelled).

23. (Cancelled).

24. (Cancelled).

25. (Cancelled).

26. (Cancelled).

27. (Cancelled).

28. (Cancelled).

29. (Cancelled).

30. (Cancelled).

31. (Cancelled).

32. (Cancelled).

33. (Previously Added) The method as defined in claim 1 further comprising:
providing a server for storing the native-language version of the software.

34. (Previously Added) The method as defined in claim 1 further comprising:
coupling the computer system to the server during installation of the software.

35. (Previously Added) The method as defined in claim 33 wherein the record
is accessible to the server.

36. (Previously Added) The method as defined in claim 35 further comprising:
an installation script stored on the server.

37. (Previously Added) The method as defined in claim 36 wherein the
translation script is stored on the server and is called by the installation script which, in
turn, calls the translation routine.

38. (Previously Added) The method as defined in claim 17 further comprising:
providing a server for storing the native-language version of the software.

39. (Previously Added) The method as defined in claim 17 further comprising:
coupling the computer system to the server during installation of the software.

40. (Previously Added) The method as defined in claim 38 wherein the record
is accessible to the server.

41. (Previously Added) The method as defined in claim 40 further comprising:
an installation script stored on the server.

42. (Previously Added) The method as defined in claim 41 wherein the
translation script is stored on the server and is called by the installation script which, in
turn, calls the translation routine.
